In the Claims:

Following is a complete listing of the claims pending in the application, as amended:

- 1. (original) A method of locating a marker associated with a patient, said marker having a marker resonant frequency, the method comprising:
- (a) applying an excitation at one of a set of frequencies to said marker using an excitation source;
- (b) receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said one of a set of frequencies;
 - (c) iteratively repeating steps (a)-(b) for all of the elements in said set of frequencies;
- (d) identifying said marker resonant frequency based upon the multiple sets of plurality of inputs;
- (e) adjusting said excitation source to provide further excitation at said marker resonant frequency;
- (f) receiving a resonance set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said marker resonant frequency; and
- (g) analyzing said resonance set of plurality of inputs to determine said location of said marker.
- 2. (original) The method of Claim 1 further including initiating multiple excitations at said marker resonant frequency and averaging said resonance set of plurality of inputs over said multiple excitations.
- 3. (original) The method of Claim 1 wherein said set of frequencies has elements that have frequencies that are spaced apart.
- 4. (original) The method of Claim 3 wherein the elements have frequencies that are uniformly spaced apart.

- 5. (original) The method of Claim 3 wherein said set of frequencies has elements that span a marker resonant frequency range.
- 6. (original) A method of determining a marker resonant frequency of a marker associated with a patient, the method comprising:
- (a) applying an excitation at one of a set of frequencies to said marker using an excitation source;
- (b) receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said one of a set of frequencies;
 - (c) iteratively repeating steps (a)-(b) for all of the elements in said set of frequencies; and
- (d) identifying said marker resonant frequency based upon the multiple sets of plurality of inputs.
- 7. (original) The method of Claim 6 further including initiating multiple excitations at said marker resonant frequency and averaging said resonance set of plurality of inputs over said multiple excitations.
- 8. (original) The method of Claim 6 wherein said set of frequencies has elements that have frequencies that are spaced apart.
- 9. (original) The method of Claim 8 wherein the elements have frequencies that are uniformly spaced apart.
- 10. (original) The method of Claim 8 wherein said set of frequencies has elements that span a marker resonant frequency range.
- 11. (original) An apparatus for determining a marker resonant frequency of a marker associated with a patient, the apparatus comprising:
- (a) an excitation source for applying an excitation at one of a set of frequencies to said marker using an excitation source;

- (b) a receiver for receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said one of a set of frequencies;
- (c) means for iteratively repeating steps (a)-(b) for all of the elements in said set of frequencies; and
- (d) means for identifying said marker resonant frequency based upon the multiple sets of plurality of inputs.
- 12. (original) The apparatus of Claim 11 further including means for initiating multiple excitations at said marker resonant frequency and averaging said resonance set of plurality of inputs over said multiple excitations.
- 13. (original) The apparatus of Claim 11 wherein said set of frequencies has elements that have frequencies that are spaced apart.
- 14. (original) The apparatus of Claim 13 wherein the elements have frequencies that are uniformly spaced apart.
- 15. (original) The apparatus of Claim 13 wherein said set of frequencies has elements that span a marker resonant frequency range.
- 16. (original) A system for locating a marker associated with a patient comprising: an excitation source emitting an exciting waveform during an excitation interval, said exciting waveform causing said marker to resonate;
- a sensing array including a plurality of sensing coils, said sensing coils outputting a plurality of inputs; and
- a receiver for analyzing said plurality of inputs to remove noise from said plurality of inputs, said receiver acting on said plurality of inputs provided during a observation interval, wherein said receiver includes a ring time control processor that allows the adjustment of the interval of said observation interval.

- 17. (original) The system of Claim 16 wherein said adjustment of said interval of said observation interval is automatically performed by said receiver.
- 18. (original) The system of Claim 16 wherein said excitation source repeats said exciting waveform repetitively and said receiver averages said plurality of inputs over a plurality of said observation intervals prior to analysis.
- 19. (original) A system for locating a marker associated with a subject comprising: an excitation source for emitting an exciting waveform during an excitation interval, said exciting waveform causing said marker to resonate;
- a sensing array including a plurality of sensing coils, said sensing coils collectively outputting a plurality of inputs during a observation interval; and
 - a receiver that window filters said plurality of inputs.
- 20. (original) The system of Claim 19 wherein said window filter is a Blackman window.
 - 21. (original) The system of Claim 20 wherein said receiver is a coherent receiver.
- 22. (original) The system of Claim 21 wherein said receiver identifies and corrects a phase shift from said plurality of inputs.
- 23. (original) A method for locating a marker associated with a subject comprising: providing an excitation source to emit an exciting waveform during an excitation interval, said exciting waveform causing said marker to resonate;

providing a sensing array including a plurality of sensing coils, said sensing coils collectively outputting a plurality of inputs during a observation interval; and

providing a receiver that window filters said plurality of inputs.

- 24. (original) The method of Claim 23 wherein said window filter is a Blackman window.
 - 25. (original) The method of Claim 23 wherein said receiver is a coherent receiver.
 - 26. (original) The method of Claim 23 wherein said window filter is a matched filter.
- 27. (original) The method of Claim 25 wherein said receiver identifies and corrects a phase shift from said plurality of inputs.

28 - 31. (cancelled)

- 32. (new) A method of determining a marker resonant frequency of a marker associated with a patient, the method comprising:
- (a) applying an excitation at one of a set of frequencies to said marker using an excitation source:
- (b) receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said one of a set of frequencies;
 - (c) repeating steps (a)-(b) for all of the elements in said set of frequencies;
- (d) interpolating a frequency response to based upon the information obtained from steps (a)-(c); and
 - (e) identifying said marker resonant frequency based upon the interpolation.
- 33. (new) The method of Claim 32 wherein said set of frequencies has elements that have frequencies that are spaced apart by a predetermined percentage.
- 34. (new) The method of Claim 33 wherein said set of frequencies has elements that span a marker resonant frequency range.

- 35. (new) A method of determining a marker resonant frequency of a marker associated with a patient, the method comprising:
- (a) applying an excitation at one of a first set of frequencies to said marker using an excitation source;
- (b) receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said excitation at said one of a set of frequencies;
 - (c) repeating steps (a)-(b) for all of the elements in said first set of frequencies;
 - (d) identifying a frequency band that contains said marker resonant frequency;
- (e) formulating a second set of frequencies within said frequency band and repeating steps (a)-(b) for all of the elements in said second set of frequencies; and
 - (f) identifying said marker resonant frequency based on the response from step (e).
- 36. (new) The method of Claim 33 wherein said first set of frequencies has elements that span a marker resonant frequency range.
- 37. (new) A method of determining a marker resonant frequency of a marker associated with a patient, the method comprising:
- (a) applying a broadband excitation to said marker using an excitation source, said broadband excitation having frequency components within a marker resonant frequency range;
- (b) receiving a set of plurality of inputs indicative of a sensed magnetic flux induced by said marker in response to said broadband excitation; and
 - (c) identifying said marker resonant frequency based on said set of plurality of inputs.
- 38. (new) The method of Claim 37 wherein said broadband excitation is applied multiple times and multiple sets of plurality of inputs are gathered and averaged.
